Enterprise Agent Engineering Capability Program

AISkillUp Tracks for ADP Engineering Teams

© 2026 TekFrameworks

Executive Context

The Structural Shift in Engineering

- ADP is transitioning from AI as an assistive layer to AI as a Production System Capability.
- This program outlines a structured capability-building initiative aligned to ADP's internal agent architecture, AWS-based production ecosystem, and enterprise governance standards.

ADP is transitioning from: **AI in Development → AI as a Production System Capability**

This proposal is aligned to:

- ADP's internal agent architecture
- AWS-based production ecosystem
- Enterprise governance standards
- Scalable engineering enablement

Program Vision

The Objective of AISkillUp

Democratize

Agent-building skills across engineering teams

Standardize

Agent architecture patterns

Align

Development practices with ADP's internal LLM & API ecosystem

Enable

Production-grade deployment

Embed

Governance, traceability, and evaluation discipline

Move Beyond

Experimentation into enterprise-scale AI engineering

Program Architecture

A Structured, Progressive Learning Model

Track Name	Duration	Outcome
Track 100 - Applied Agent Engineering Foundations	16 + 2 hrs (In-Person/Virtual)	Build production-aligned enterprise agent prototypes

This model enables:

- Cohort-based rollout
- Skill progression
- Selective advanced participation
- Production-aligned competency development

Pre-Workshop Technical Alignment

M0 - Environment Setup Readiness

Session Details

Duration: 2 Hours (In-person/Virtual)

Audience: All Track 100 Participants

Given the accelerated and lab-heavy nature of AISkillUp, Day 0 ensures smooth execution and maximized hands-on productivity.

Objectives

- Validate AWS environment access
- Confirm LLM endpoint connectivity
- Verify API access permissions
- Ensure local development readiness
- Test authentication & SDK installation
- Validate vector DB / embedding access
- Execute basic lab dry run
- Resolve access gaps before in-person session

100%

Participant Environment Readiness

No infrastructure troubleshooting during training

0

Access Gaps on Day 1

Optimized in-person lab execution

2hrs

Duration

Enterprise-grade delivery standard

AISkillUp Track 100

Applied Agent Engineering Foundations

2 Days | 8 Hours per Day | In-Person:

Enable software engineers (Java, .NET, Python, etc.) to design, build, and test enterprise-grade agents aligned to ADP's architecture and AWS infrastructure.

Module Breakdown

M1 : LLM Foundations

- LLM APIs & reasoning flows, prompt-to-action pipelines, tool/function calling, context window management, secure endpoint usage, error handling & validation.
- **Mini-Hackathon:** Build a structured conversational agent triggering backend workflows.

M2 : RAG Fundamentals & Retrieval Patterns

- Document ingestion & chunking, embeddings & vector DB integration, retrieval strategies, semantic layer construction, secure data integration.
- **Mini-Hackathon:** Build a RAG-enabled enterprise agent.

M3 : Governance, Evaluation & Traceability

- Output reliability testing, Prompt & response audits, Drift detection & observability, Risk mitigation frameworks, guardrails, LLM cost / latency trade offs
- **Lab:** Establish Governance and Traceability for LLM

M4 : Agentic AI: Design → Prototype → Production

- Multi-step orchestration, memory & state management, API-driven action execution, MCP-Model Context Protocol, production integration patterns, observability basics.
- **Mini-Hackathon:** Build a mini-HR or ticket-resolution automation agent.

Note: *In addition, we will include a self-paced module explaining how ADP supports core RAG and Agent development capabilities, equipping participants with foundational knowledge.*

Outcomes for Track 100:

Track 100 Outcomes: Applied Agent Engineering Foundations

By the end of this track, participants will be able to:

- ✓ Architect conversational enterprise agents
- ✓ Integrate LLM endpoints securely
- ✓ Orchestrate enterprise APIs
- ✓ Implement RAG pipelines
- ✓ Build production-aligned prototypes
- ✓ Understand AWS deployment considerations
- ✓ Apply structured evaluation & traceability rigor
- ✓ Integrate within ADP's internal ecosystem
- ✓ Demonstrate production-grade thinking

Cohort Rollout Strategy & Delivery Model

How We Scale This Program

Cohort Rollout Strategy

01

Cohort size: 30 - 60 Engineers

02

Multi-wave Rollout

03

M0 Environment Standardization

04

Track 100 as Applied Foundation

Delivery Model

- Immersive in-person workshops
- ADP-aligned use cases (leave, payroll, ticket automation)
- AWS-aware architectural patterns
- Lab-driven learning and production-aligned constraints

Differentiation

What This Program Is - and Is Not

This is NOT:

- Prompt engineering training
- Copilot enablement
- AI-in-SDLC extension
- Generic GenAI workshop

This Is:

- Enterprise Agent Engineering Bootcamp
- Production-Grade Architecture Enablement
- Governance-First AI Capability Program
- System-Level Agent Development Training

Pedagogy

- 30% structured architectural clarity
- 70% applied hands-on (incl. lab work and Mini hackathons)
- Real ADP-style use-case alignment
- Stack-agnostic engineering approach
- Production-aware design patterns

© 2026 TekFrameworks

Organizational Impact

Within 4 – 6 Months, ADP Can Expect:

Expanded internal agent engineering capability

Reduced dependency on limited AI specialists

Standardized architecture patterns

Faster innovation cycles

Safer production deployments

Governance-aligned engineering culture

Increased engineering confidence

In AI-first systems

© 2026 TekFrameworks

Next Steps

Moving Forward with AISkillUp

Step 1

Confirm first rollout cohort size

Step 2

Align on AWS lab access model

Step 3

Identify use-case datasets for labs

Step 4

Finalize delivery calendar

- **ADP is transitioning from AI in Development → AI as a Production System Capability**.
- AISkillUp is the structured program to make that transition real, scalable, and governance-aligned across engineering teams.
